

Blameless postmortem on Assignment 1

1. Goals achieved
 - a. Created a simple user interface for the purpose of the assignment just to make sure the data can be visualized on a dashboard
 - b. Ironed out the roles and responsibilities of each team member.
 - c. Submitted all necessary items such as documentation, roadmap and meeting minutes to github timely.
2. What goals have been missed and by how much?
 - a. Meeting documentations were not written in the correct format since PDF will be difficult to be searched in. We believe that the content of the document is substantial but we will need to improve on the way we present and submit it. Submitting them in markdown on Python will be more suitable.
 - b. User interface design was overly simple. It does not give the TA or any assessor any means of understanding our group's progress and suitability of the entire project
 - c. README document could have been more comprehensive. Even though it may be simple and could work, more thought could have been put in increasing the detail of the document.
3. How plans will need to be adjusted, based on remaining time available and project scope
 - a. Project is timeline is going as planned so far but we will speed up if needed
4. What, if any, adjustments or decisions need to be made in light of what we have learned about project scope and capacity since
 - a. We realised that we spent much more time on the machine learning and AI part of the application and we should have kept the idea simpler and iterated from there instead of trying to build everything then deploying.
