

Week 13 Meeting Notes

1. Call to Order

A meeting was held at 33 Charles St East on 25 November 2022.

2. Attendees

1. Regan
2. Riley
3. Jared

3. Open Issues for Week 13

This was a quick meeting to recheck on the progress of each team member.

1. Functional requirements (Riley's progress)
2. Acceptance Testing and Deployment on Github Actions (Jared's progress)
3. Presentation Slides (on 28 November 2022)

1. Functional requirements
Riley has completed and pushed his code successfully. Looks good.
2. Acceptance Testing and Deployment
Jared has completed this and pushed the necessary items into the repo. Looks good.

3. Presentation Slides

In the previous week's meetings, the 2 main changes discussed were as follows.:

1. We needed to add a slide on why we wanted to do this web application. What was the inspiration behind it and did we achieve the intended outcomes?
2. There should be a stronger emphasis on the reason we took certain actions and not too much on the machine learning algorithm. So perhaps, explain less on the machine learning algorithms, and more of why we choose Github actions over Jenkins for example.

The changes have been completed and we are left with several rounds of rehearsals before the actual presentation on the 28th of November.
